

‘NON-PROVINCIAL’ UNION LTD PLANS
INFORMATION FOR DOCTOR:
CONCERNING YOUR PATIENT'S
LONG TERM DISABILITY CLAIM

You play an important role in your patient's Long Term Disability claim. Please remember that:

Long Term Disability (LTD) benefits are provided to your patient by one of the above Trusts which is a not-for-profit, employee life and health trust located in Vancouver. The Trust is funded by contributions paid by healthcare, community social services and/or public sector employers and employees in BC. Claims are assessed by the Trust's claims paying agent, Canada Life in Vancouver and Langley. The Trust is not an insurance company and the benefits it provides are not insured by an insurance company. The Trust is not subject to regulations made under the *British Columbia Financial Institutions Act*.

Your patient's LTD claim can only be assessed when all the medical information has been received by Canada Life. Please complete the Attending Physician's Statement as soon as possible. Attach all relevant test results, x-ray reports and/or specialists' reports that support your diagnosis. Send the information to Canada Life at

Vancouver Office: Suite #1500 - 1055 Dunsmuir Street, Vancouver, BC, V7X 1K8
or

Langley Office: Suite #500 - 19933 - 88th Avenue, Langley, BC V2Y 4K5

or give it to your patient. If you have questions about completing the form, please call Canada Life at 604-646-1200 (Vancouver) or toll-free at 1-888-292-4111.

Rehabilitation services are available through Canada Life if medically appropriate. A Rehabilitation Consultant will work with your patient to arrange a return to work program, vocational assessment, work conditioning, counseling, rehabilitative employment and/or retraining for another job. There is no charge for this service. The employer may also identify other available jobs for your patient, and/or directly offer disability management programs that may include medical interventions, transitional work, graduated return to work, workplace modifications, vocational rehabilitation or training.

As you are aware, this is a difficult time for your patient. You can greatly assist in the claims process by promptly sending in complete medical information, and by supporting your patient in any appropriate rehabilitation plan.
